**Location:**

Manchester Schools

**Project Details:**

New Schools and  
Academies  
(9no currently)

**Value:**

£1,600,000.00

Advanced Utilities Limited

Project Profile

## Manchester Schools

The project consists of a stream on new Schools and Academies. Our involvement commenced at feasibility stage giving costplan advice to the Main Contractors and MCC, who were housed together in Council offices.

The project delivered incoming Statutory Connections and on site distribution, on Project ranging from new Academies to phased rebuilds of existing schools.

The bulk of the sites were on live school campus's and involved high levels of safety, given the fact we were working in areas where staff, parents and pupils were all in close proximity.

Close liaison was required with the designers, client and schools, to ensure that all legal matters were closed out as most schools had new Substations on site, and required wayleaves and easements.

Utility metering/management was required to ensure that all new Connections could be monitored by the councils Energy Management Unit.

Nine schools were completed and involved sites across Manchester over a 24 month period. Detailed planning was required to ensure that all sites were delivered safely, on time and within budget
